

How We Install: Zipper Window Fittings

1.

We ensure the surface area is clean and dry before placing the window over the area that requires entry.

5.

We cut an opening on the plastic, following the same shape as the zipper.

Plastic is only cut when entry is required. This is to keep the packaging weather-proof.

2.

The window is stuck in place by simply peeling the double-sided tape.

6.

We attach the Velcro rain flap by closing the zipper and shrink-taping all the edges shut.

This prevents water from entering the zipper.

3.

We then tape around edges of window with 2 layers of shrink-tape...

Velcro rain flap is not taped yet.

7.

Finally, we gently apply heat over the tape to activate bond between tape and shrink-film.

This is done carefully to prevent shrinking the tape.

4.

...and attach the zipper.

**The Zipper Window Fitting
is complete.**
